

Waste water treatment equipments for Automatic operation with space saving

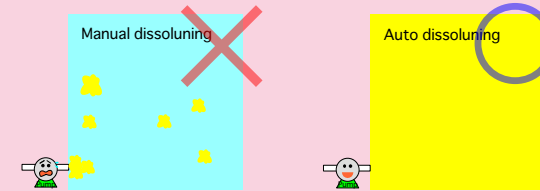

High Pressure Floatator

Unlike settlement tank, High pressure floatator collect sludge by the force of air. So we need not to use heavy inorganic chemical and can reduce the amount of sludge absolutely. And it is operated by automatic

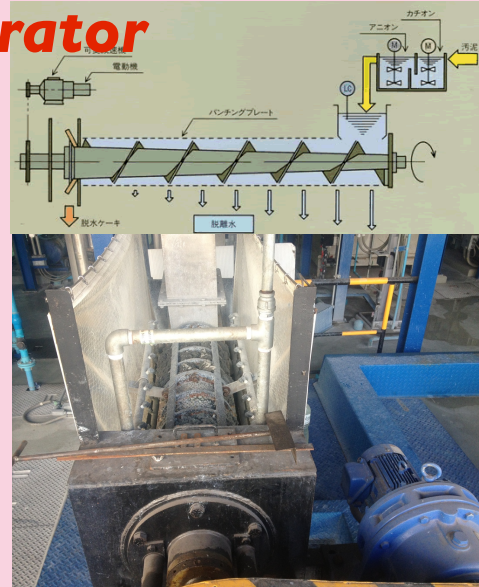

Polymer Auto-Dissolver

Auto-dissolver prevent to make some block of polymer in the tank when dissolving and prevent clogging of pump. And dissolve automatic and continuously instead of us.

Screw-press dehydrator

Other type of dehydrators such as Filter-press can not dewatering continuously, and need manual operation, and need a large space... Our Screw-press can resolve all of this matter.

Wage wire screen

Wage wire screen make a significant effort when we have to treat a large quantity water which have many sludge. And because wage wire has a special shape, screen is difficult to clogging.
